Download links: How can I stop all further executions in a clojure chain? I have a chain of functions in my code that is processing some code in Clojure. I would like to be able to stop the chain of functions and to restore execution to the point it was before I called chain-of-functions. How can I do that? A: You can use the doall function. It's just like an immediately-invoked-function-expression, except it only runs the expression once, and returns nil instead of a value. For example, (doall (do-something-I-dont-want-to-repeat 1 2 3)) Is the same as (do-something-I-dont-want-to-repeat 1 2 3) but less typing and easier to write. From there, it's as easy as (rest) whatever-you-want-to-do) for your example. A: I usually just put a while loop around the sequence of functions and conditionally break out of it./* * Copyright (C) 2013-2015 RoboVM AB * Licensed under the Apache License, Version 2.0 (the "License"); * you may not use this file except in compliance with the License. * You may obtain a copy of the License at * * 45cee15e9a
