And I really can't understand that. When I type this `import sys from sys import argv name = argv[1] age = argv[2] print('Your name is %s' % name) print('And you are %d years old' % age)` I get this output. I guess it is like, the line-break is moving the word import and then age, instead of moving age and then the word import. Can someone please explain to me? A: Your assumption is correct: import is moved, then sys, then age. This is due to the way Python parses code. The end of the line for a string is a newline, so the next token will be age. (Using multi-line string literals would be a little better - there's no endlime to recognize.)

The Supreme Court agreed to decide whether the lower courts got it right when it ruled that a dispute between two Native Americans and a bank over who owns a home now valued at \$38.5 million is not a matter for the highest court of the land. The case was a byproduct of a half-century-long family dispute that began with an inheritance battle between three brothers, only one of whom was Indian. More than 30 years later, a half-million dollars richer, Walter and Eleanor Squaw Bosshardt of Wisconsin purchased the 1.4-acre Clifty Falls property in Missouri along the Mississippi River in 1987 and built a home on it. Walter died in 1999. In 2007, Eleanor, a white woman, gave a deed to the land to Bank of America. The bank then sold the land to a land trust, which, in 2011, gave the land to the Turtle Mountain Band of Chippewa Indians, according to the tribe. In the early 1980s, one of Walter's children, James, died and left a parcel of land with a house and a shed on it in Winona, Min

One thing is for certain – Indies are in a good place right now. Why? Simply put, Indies are hip again. Indie games are a phenomenon in the gaming industry and they're not just making games, they're making money at it. Everyone is in the business of making money these days and the trend is clear: Indies are doing a damned good job of it. Ever since the indie game revolution started, the phenomenon is still going strong. Even though the quality of indie games still has a long way to go, and it's not just about what Indies are doing, but rather how Indies are doing it. Indies are so good these days, that even the big game companies are paying attention. According to the data provided by Unity's 2018 Game Developer Report, indie games make up more than 50% of all the games published by Unity, as of the year of the report. That's big. The same report also shows that in 2018, sales of indie games on Steam increased by almost 30% compared to the year prior. The indie game community is a big one and the problem is, there are so many of them. Indie games have created a niche for themselves within the gaming industry, but they still can't seem to get out of their own way and gain a larger audience. The problem? The problem is that there are too many indie games to play and every month, more and more are released. Every day, a fresh new indie game is announced and added to the already hectic release calendar. The list of available indie games is immense and it's hard to keep up with the steady release of new games. So how can the independent gaming community make itself known to the mainstream? This is no easy task. Sure, it's easier to go indie and

The latest version of the software is available here and works on Mac and Windows. A search engine based on Synnefo, a Free and Open Source System for Smart Cities. Drones are everywhere. They are used by police and the military for surveillance. They are used by insurance companies to monitor wind farms and roads. They are even used by burglars to explore dark and dangerous places. The question is: what happens when drones are hacked? The International Workshop on Cyber-security and Privacy in the Internet of Things (IoT) organized by PUCR, INESC and Associação Portuguesa de Informática, in association with CCIA and Associação Civil de Engenharia de Comunicações (ACE), took place on April 7, 2016 in Lisbon, Portugal. Cyber-security and privacy in the IoT, identifies key research challenges and gives an overview of ongoing and recent research, as well as recommendations for action by industrial players and governments. It is intended as a continuing framework for cyber-security and privacy in the IoT. The workshop was supported by European Commission and by the Digital Society and Internet of Things Inno.eu. The workshop was attended by approximately 70 participants from academia, companies, government agencies and research institutions, to discuss cyber-security and privacy issues in the IoT. The specific topics covered were privacy and security issues in the IoT. Also topics like smart meters, smart grid, smart transportation, and so on. Presentation: The presentation of the workshop started with a brief overview of the cyber-security landscape and presented some of the most significant international initiatives in this area. Participants were informed about the vulnerabilities of the IoT and the need to make IoT a secure technology. The hacking of drones, the security of cloud services for IoT, the security of transportation systems (buses, trains, planes), were the main topics discussed in the first two sessions of the workshop. The third and fourth sessions were about privacy and security in the IoT, and specifically, the security of the sensors in the IoT, e-health, security of ICT services, such as cloud services, and the security of people's lives. Discussions: Participants discussed the cyber-security issues of IoT devices and the data they collect, ranging from identification to security, as well as privacy concerns. Data security and sharing, trust and transparency issues, and vulnerabilities in cloud services, such as Amazon and Dropbox, were also presented. Regarding IoT devices, the participants focused on the security of our homes and the security of sensors that could be used in smart homes, as well as the security of Internet
